**Hipp S5er Format (Osteuropa)**

Schnafröte Flächen saft - und lackfrei!

---

**Preparation**

Please pay careful attention to the instructions when preparing milk formula. Incorrect preparation or storing a prepared feeding bottle for a longer period of time can be harmful to health, e.g. due to undesired bacterial growth.

For this reason, always prepare the formula from scratch before every meal and discard immediately. Do not use leftovers. Close bottle, screw and vigorously close the opened bottle tightly after every use, store in a dry place at room temperature (max. 25 °C) and use up within 3 weeks.

Pour the required amount of water into a clean feeding bottle. Cool to approx. 40-50 °C.

Pour 2/3 of the prepared water into the feeding bottle.

Cool down to drinking temperature (approx. 37 °C). Check temperature. Screw the bottle tightly. Add the remaining water and again shake several times.

---

**Drinking amount & dosing**

The drinking amount and feeding interval vary from baby to baby. The recommended drinking amounts and the number of bottles per day are guidelines. Your baby does not necessarily need exactly the feeding times indicated.

Please use the enclosed measuring spoons only!

Babies need about 5 meals a day. With every newly introduced food or pay meals, you should drop one feeding bottle.

---

**Important information**

**Care your baby's nutrition**

Exclusive breastfeeding during the first six months is perfect for your baby. Like any follow-on milk formula, Hipp 2 Combiotic® should ideally be used from six months onwards as part of a mixed diet, and not as a substitute for breast milk during the first six months. Individual growth and development requirements of your baby might make it necessary to transition from formula feeding to baby food as part of a mixed diet at an earlier point in time. Please consult your pediatrician.

**Care your baby's overall health**

Just like breast milk, all follow-on formula contains carbohydrates. They are an important part of your baby's nutrition. Breast milk contains natural lactic acid cultures that are typically isolated from breast milk. Breast milk contains a natural lactic acid cultures that are typically isolated from breast milk. Hipp 2 Combiotic® contains a natural lactic acid cultures that are typically isolated from breast milk.

**Use**

Hipp 2 Combiotic® is formulated to suit the particular nutritional needs of babies from 6 months and supports their healthy development.

Diligence and experience – for the most valuable in life

For more than 50 years, we have been putting our entire diligence and experience into producing excellent milk formulas. Hipp milk formulas are composed in such a way that your baby receives exactly what she or he needs for a healthy development. These compositions are based on the latest scientific research findings in milk formulas. And additionally, all this is delivered in Hipp's very particular organic quality.

Hipp 2 Combiotic® is our latest generation of milk formula and exactly pegged to your baby's nutritional requirements. In every respect. We are putting all our experience into producing milk formulas that are not only rich in organic ingredients and the unique combination of probiotic ingredients, but are inspired by nature. Thus, you are providing for your baby's good start into a happy future.

Hipp 2 Combiotic® with the unique combination of:

- prebiotic dietary fibres (GOS) modelled on breast milk. These prebiotic dietary fibres support healthy intestinal flora
- natural lactic acid cultures that were originally isolated from human breast milk. Breasts milk contains a large number of probiotic columns that may differ individually.
- vitamin A, C and D – support a healthy immune system
- Omega-3 fatty acids: important for the development of all cells and nerve cells and therefore important for your baby's healthy growth.

Hipp 2 Combiotic® is easy to digest and filling in each age step with easy to digest, gluten-free ingredients.
